AutoCAD has two types of file type associations: Implicit and Explicit. For a file extension to be an implicit association, it must have an associated file type or codec. A file type is composed of one or more files with the same file extension. The file type is used by the Autodesk Application Server (AAS) to recognize a file extension based on its type or codec. The AAS can then recognize the file by comparing the type or codec with the associated data. For an extension to be an explicit association, the extension needs to be registered with a codec. A codec provides a method of converting information from a file type into a format recognized by the software application. When an application uses a codec, the software application performs the operation of type and codec conversion. The AAS also recognizes a file extension as an explicit association if a codec has been specified. The "File Type and Associated Codecs" section below lists the file type associations that are available for file extensions that are only recognized as an implicit association, as well as those extensions recognized by Autodesk Exchange Apps and the Autodesk Application Server. For those extensions that are recognized as an explicit association, the "AutoCAD Extension" column provides the extensions that are used by the Autodesk Application Server, and the "AutoCAD Exchange App" column provides the extension that is used by AutoCAD Exchange Apps. An AutoCAD Exchange App may use any codec supported by the Autodesk Exchange Application Server. AutoCAD file type associations For file extensions that are only recognized as an implicit association, see "File Type and Associated Codecs" below. For extensions recognized as an explicit association, see "AutoCAD Extension" and "AutoCAD Exchange App". Revisions Revisions (commonly referred to as CADx, "CAD" for short) are binary files containing versions of AutoCAD. These files are created when a user or program modifies the drawing. As AutoCAD can only open, save, and close one version of the file at a time, only one revision of the drawing can be open at one time, and each revision can only be saved after it has been closed. Revisions also have the ability to have locks placed on them. In the majority of cases, these locks are used to ensure that only one user or program is modifying the drawing at one time, preventing two users or programs from modifying the drawing simultaneously a1d647c40b

Somehow, after the blessings of Hanukkah, we now find ourselves in the midst of Hamukkah-related conversations on Twitter. Maybe it's because there's so much going on right now in Israel, the Middle East and beyond that's both confusing and inspiring. Maybe it's because of our Hanukkah party last week. Or maybe it's because this week's Torah portion (from Genesis) is a pithy and evocative one. Whatever the case, we've got a few topics that we'd like to run by you this week. Why is Hanukkah called a "festival of lights"? Last year, we were asked this question about a Hanukkah themed question we posted on our Facebook page. This question, along with the hundreds of thoughtful, thoughtful, thoughtful comments we received, helped us to take a closer look at the history of this holiday, and about the ways in which different communities have interpreted this holiday. So this year, we asked what the festival is actually called in Israel. We know it's called "the holiday of lights" in English, and we know it has a name in Hebrew, "the festival of oil lamps." But what is it actually called in Israel? The short answer is: a lot of things. Here's a list of some of the names you'll find in Israel, and in different communities: The festival of Hanukkah. ("Hanukkah yotzum" in Hebrew) The festival of lights ♦
